
Biodiversity Statement

Targa recognizes the importance of environmental quality and biodiversity in areas in which we operate. We believe that all of our stakeholders, including local communities, stand to gain valuable benefits from greater ecological surroundings. Our goal is to minimize impacts our operations may have on biodiversity by utilizing the following approaches:

- Mitigate – Research and determine potential scenarios and outcomes related to proposed projects to understand how we can avoid or minimize impacts to protected species and ecosystems;
- Collaborate – Foster cooperative relationships with landowners and stakeholders to successfully manage and alleviate construction and/or operational impacts to their property;
- Remediate – Restore ecosystems and habitat compositions to conditions in place prior to construction and/or operational impacts.

We are mindful of the impact our operations can have on the environment and consistent with our Code of Conduct, we follow all applicable laws and regulations when conducting all business matters.
